Subject:	09/875,228 RUSH

Please authorize the following RUSH search for 09/875,228, which is an amended case.

Please search the commercial and interference databases for bases 1-11407 of SEQ ID NO:1. Please also perform an oligo search with a lower limit of 150 nucleotides.

Please also align SEQ ID NO:1 with SEQ ID NOS: 2 and 3.

Thank you-

Please disregard the previous email, and just perform the oligo search, limiting the sequence searched to bases 5976-9620 of SEQ ID NO:1.

How about just searching a few 0.5 kb segments?

Please limit the search to bases 1-9765.

Thanks -
RS

Subject:	Rush request
Importance:	High

Hi Richard and Scott,

We have a problem with the rush request 09/875,228. The request as submitted will require over 45 hours of processing time because sequence #1 has 11,407 nucleotides residues and because of the oligomer search. Sequence id #1 exceeds our residue limit of 10,000. The search will also require additional processing time as the 45 hours does not include the time required to process the alignments of seq #1,2 and 3 . Our rush and non rush servers are full with expected turnaround of results estimated to be within 10-15 days of receipt.

Is there any way possible for you to modify your request?
